CONSERVATION TECHNOLOGY

WHY CHOOSE

CONSERVATION TECHNOLOGY ?

We get rid of humidity in walls thanks to our revolutionary system, which emits **very-low-audio-frequencies**, **without any repercussion on users' health**.

This device pushes water molecules down to the building's foundation by gravity and dries the walls in 6 to 12 months depending on the building.
The capillary rise is treated at its source.

ELIMINATE HUMIDITY

WITHOUT RISK !

Easy to install,
without noise
or dust

Not harmful
to one's health
(certified Product)

Treats the source
of the problem
(rising humidity)

The cost of heating
is reduced

Increases the
value
of your house

Efficient results

Economical process
to get rid of humidity
